

March 20, 2008

Robert C. Burmark
Environmental Engineer
State of Washington
Department of Ecology
PO Box 47600
Olympia, WA 98504-7600

Dear Mr. Burmark,

Thank you for your evaluation of Port Townsend Paper Corporation's BART Analysis Report (the Report). We would like to provide further information in response to the questions that arose in your review.

The computerized control project at the No. 10 Power Boiler had been approved as of the writing of the Report. However, the project was determined to be technically and economically infeasible for the 2008 planning process, and the project has been deferred at this time. We apologize that it appeared prematurely in the Report.

Energy conservation continues to be a strong driver for recovery and the other units for looking for ongoing improvements. During the course of conducting the BART analysis, our consultants and our in-house operational and engineering specialists did not identify particular projects for the emissions units or pollution control devices that lent themselves to line-item identification for BART.

Please contact us if you have further questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Kristin Marshall".

Kristin Marshall
Environmental Manager
